

### Sponsor News

XRacing are proud to announce three new sponsors.

RapidHarness is a CAD solution meticulously crafted for designing production-ready wire harness schematics. It stands as the undisputed industry standard software, and we couldn't be more delighted with the sponsorship.

Since 1986, Jetex has addressed the scarcity of performance exhaust suppliers, challenging dominant brands. Their diverse range initially featured mild steel exhausts, later expanding to stainless steel systems, air filters, and catalytic converters, maintaining high standards in the evolving aftermarket.

Efes Grill is a local kebab shop in the centre of Exeter. A common visit of many Exeter university students and by extension XRacing members. We are very happy to announce the sponsorship with this well-known local brand.

### Sim Racing

In late March, our team participated in the 5th round of the IMechE Formula Student Sim Racing Series, showcasing the skills of our dedicated racers, Alex Barton and Jeremiah Elliot. Their exceptional performance catapulted us from 14th place in the championship standings to 12th position. Notably, Alex clinched a remarkable third place (P3) finish, securing our team's second podium placement in this competitive series.

This significant achievement highlights the relentless determination and talent of our drivers, propelling us closer to our goals in the championship.

## Technical Updates

Key milestones are swiftly approached. We're midway through developing our suspension system to enhance handling and stability, essential for our vehicle's track success.

The dyno test is next, a vital moment to assess power and fine-tune our car for optimal performance. Following this, a test day awaits, a crucial event to see our efforts in action and validate the enhancements made, setting the stage for future progress.

As we push forward, every test and adjustment brings us closer to our goal. With a clear focus, we're poised to exceed our expectations, driving our project towards new heights.

## 'The Office' Execelebrate

In March, our Creativity and Publicity Lead, Kit Joubert, gave an insightful view on what the business teams do within XRacing. On the student run podcast, Kit stated "we mean business this year", supported by the team working around the clock to make sure our car can finish on a high at Silverstone.

**"We have accomplished our goal, now just going higher and higher"**

The business team have reached and excelled past our goal set at the beginning of October. This continued growth and development is helping the team come together as the weeks count down to the event.

The business side of the team has created a foundation for the technical teams to build on by gaining sponsorships, but for the business and non-STEM students, we are learning beyond our course and learning from applied experiences.

## Thank you to our Sponsors
